DETAILED ACTION

Priority

If applicant desires priority under 35 U.S.C. 120 based upon a previously filed application, specific reference to the earlier filed application must be made in the instant application. For benefit claims under 35 U.S.C. 120, 121 or 365(c), the reference must include the relationship (i.e., continuation, divisional, or continuation-in-part) of the applications. This should appear as the first sentence of the specification following the title, preferably as a separate paragraph unless it appears in an application data sheet. The status of nonprovisional parent application(s) (whether patented or abandoned) should also be included. If a parent application has become a patent, the expression "now Patent No. _____" should follow the filing date of the parent application. If a parent application has become abandoned, the expression "now abandoned" should follow the filing date of the parent application.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claim 1 is rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 1 of U.S. Patent No. 5,897,507 to Kortenbach et al in view of Ryan et al. Kortenbach et al claim a distal assembly having a first jaw and a second jaw pivotable relative to the first jaw. An irrigation conduit is coupled to the first jaw and an aspiration conduit is coupled to the second jaw. A flexible tubular member comprising an irrigation and aspiration conduit is claimed. A proximal actuator is claimed. Kortenbach et al do not claim an irrigation port or an aspiration port. However, Ryan et al teach that in a biopsy system having irrigation and aspiration capabilities, it is well known in the art to provide a proximal actuator handle comprising an irrigation (32) and aspiration (34) port. See Fig. 1. It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the proximal actuator of Kortenbach et al with an irrigation port and an aspiration port, as taught by Ryan et al, to provide the necessary inlet for irrigation and aspiration capabilities.

Allowable Subject Matter

Claims 2, 4-6 and 86-88 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: the claims distinguish over the prior art. Huitema et al teach a first jaw and a second jaw pivotable relative to the first jaw as well as aspiration and irrigation conduits. Huitema et al do not teach or suggest the specific configuration of an irrigation conduit

leading to and in fluid communication with the first jaw and an aspiration conduit leading to and in fluid communication with the second jaw.
